

# Conference on Bio-Energy Production through Anaerobic Digester Technology

Tuesday, January 15, 2008

Lansing Center  
Lansing, Michigan

The Michigan Department of Agriculture is pleased to announce a conference on anaerobic digester technology. Our goal is to promote the use of alternative bio-energy by raising awareness and encouraging dialogue on the development of anaerobic digester projects utilizing a variety of agricultural by-products for enhanced energy production, economic growth, and environmental protection.

The conference will bring livestock producers, food processors, and ethanol producers information on the benefits of anaerobic digestion as an alternative to by-product management. Topics will include:

- ✓ Basics of Digester Operation
- ✓ Protocol for the Evaluation of Biogas Production Potential
- ✓ Project Financing
- ✓ Alternative Energy Utilization
- ✓ Net Metering in Michigan
- ✓ Anaerobic Digester Regulations
- ✓ Co-Feed Projects
- ✓ Panel Discussion

Until December 21, the cost for attending this conference is \$15.00.
